

Functional & Performance Testing Template

Model Performance Test

Date	19 February 2026
Team ID	LTVIP2026TMIDS62122
Project Name	Startup Success Prediction System Using Machine Learning
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to Test)	Test Steps (How to Test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text Input Validation (e.g., Startup Name, Industry)	Enter valid and invalid text values in input fields	Valid text accepted, invalid input shows error message	As Expected	Pass
FT-02	Numeric Input Validation (e.g., Funding Amount, Team Size, Revenue)	Enter values within valid range and out-of-range values	Accept valid numbers, show validation error for invalid entries	As Expected	Pass
FT-03	Prediction Generation	Enter all required startup details and click "Predict"	System displays Success Probability and Prediction Result	As Expected	Pass
FT-04	ML Model API Connection	Trigger prediction and verify backend model response	Backend returns prediction without error	As Expected	Pass
FT-05	Login Authentication	Enter correct and incorrect login credentials	Valid login grants access; invalid shows error	As Expected	Pass
PT-01	Response Time Test	Measure time taken to generate	Prediction generated within 3	2.4 seconds	Pass

		prediction	seconds		
PT-02	Concurrent User Test	Simulate multiple prediction requests simultaneously	System handles multiple users without crash	Stable	Pass
